Sebdel

Hands-on AI Mentorship

Learn to build with AI by working on your own project.

Service overview · English (US)

Version 1, November 2026

Who it's for

Founders and managers

Who want to understand AI well enough to direct it with judgment.

Independent professionals

Who want to build their own tools and do better work.

People with an idea

And the drive to learn by building it, even if they've never coded.

When it makes sense

You want to learn to build or decide with AI, and you'd rather do it on real work.

The underlying problem

Courses don't reach your case, and handing everything off leaves you dependent on others.

What changes

You make progress on your goal and finish with the judgment and habits to keep going alone.

This is what we aim for. It isn't a guarantee: it also depends on the decisions made along the way.

What's included

- ✓ Goal definition
- ✓ Live working sessions
- ✓ Tasks between sessions
- ✓ Notes from each session

What you get

A written goal

What you want to achieve and how we'll know you did.

Working sessions

Live, on your project, with your decisions on the table.

Tasks between sessions

Small and specific, so you move forward on your own.

Notes and next steps

What we decided each time and what comes next.

Hands-on AI Mentorship

How we move forward

1

Choose

We set a goal that fits the mentorship.

2

Work

Each session centers on what you built.

3

Practice

You do the tasks and bring back what didn't work.

4

Close

We review what you learned and what continues without me.

An example

What it could look like

Illustration: not a real client

Illustrative example, not a real case. A manager wants a weekly sales dashboard. The first session defines what it must show; between sessions she builds it; in the next one we review what didn't add up.

↗ **Work you can review** ↗ **How I operate with AI**

Who does what

My part

I run every session myself and review what you build.

The team

The team isn't involved, unless we agree on a specific technical consult with Daleki Lab.

Time and participation

Duration

Based on the goal. The number of sessions is set before we start.

Training

A workshop teaches a group a method. Here you learn, on your own work.

Implementation

In a project Daleki Lab builds it for you. Here you build it.

What I need from you

- → One concrete goal
- → Time for tasks between sessions
- → Your own accounts for the tools we use

Investment

How it's set

Quoted by number of sessions once the goal is set. You get the terms in writing.

Not included

- ✕ Unlimited support or constant availability
- ✕ Me building the project
- ✕ Tool licenses
- ✕ Legal, tax or financial advice

Common questions

Do I need to know how to code?

No. We use tools designed for business people. If your case needs something technical we take it step by step, and if it's beyond you, I'll say so.

Can I message you anytime between sessions?

The mentorship doesn't include unlimited support or constant availability. Write down what comes up and we work on it next session.

What if I later want someone to build it for me?

That would be a separate project with Daleki Lab. There's no obligation to move into implementation.

Next step

Tell me what you want to learn to do.

Share your goal and how you work today. The WhatsApp message is ready for you to fill in.
