AI Workshops for Teams

# AI workshops where your team learns by doing the work.

Service overview · English (US)
Version 1, November 2026

# Who it's for

## Business teams

Communications, operations, admin, sales and project management.

## Leaders

Who need shared judgment before asking anything of their people.

## Associations and institutions

The case and examples are adapted to the group.

When it makes sense

# Your team uses AI in its own way, or not at all, and needs a shared starting point.

---

The underlying problem

Everyone experiments alone, and nobody knows what data they can use or how to check the output.

# What changes

## A group with a shared method and one real task finished by each participant.

This is what we aim for. It isn't a guarantee: it also depends on the decisions made along the way.

# What's included

- ✓ Case preparation
- ✓ Four hours of guided practice
- ✓ Templates and support material
- ✓ Seven-day application plan

# What each person takes away

## One finished task

Worked on during the session, from their own day-to-day.

## Templates

For researching, drafting, analyzing and checking answers.

## Judgment on what to delegate

What to ask, what to verify and what stays human.

## Seven-day plan

To repeat the method with adjustments.

# How it's prepared and delivered

1

## Define

Group profile and the tasks worth practicing on.

2

## Prepare

I build the case from public, fictional or authorized material.

3

## Practice

Four hours of demo, exercise and review.

4

## Apply

Each person leaves with a seven-day plan.

An example

# How the practice works

**Illustration: not a real client**

The workshop case is built from public, fictional or company-authorized material. What people see in the room is an exercise, not another client's result.

# Who does what

### My part

I prepare the case and run all four hours myself.

### The team

For large groups, the proposal states whether extra in-room support is needed.

# Time and participation

## Duration

**Four hours. Preparation depends on the case.**

### Length

Four hours, in person or remote.

### Requirements

No technical background needed. Each person works on their own computer.

## What I need from you

- → Participant list and their roles
- → Real tasks or authorized examples
- → A room or link, and one computer per person

# Investment

## How it's set

Quoted by group size, format and case preparation. You get the proposal in writing.

## Not included

- A production system for each participant
- AI tool licenses
- Follow-up not agreed in advance
- Official certifications

# Common questions

## Does my team need technical knowledge for the AI workshop?

No. The workshop is designed for people with no prior technical experience. We work with conversational tools and a guided case, step by step.

## Which artificial intelligence tools are used?

The ones your organization authorizes. Before the session we validate tools and access so nobody loses time setting up on the day.

## Can the workshop be adapted to my industry?

Yes. The practice case, the examples and the final challenge are prepared around the group's profile, whether it's a company, an association or an institution.

## What happens with my company's data?

During the workshop we work with public, fictional or authorized information. Part of the learning is knowing which data isn't shared with an AI tool.

Next step

# Let's make AI start being useful for your team.

We define the group, pick a challenge and confirm date and format. Message me on WhatsApp and the message is already written for you to complete.
